Online Meal Ordering Platform

for your brand and your customers

Mobo2Go

click . order . eat

Hungry for orders?

Mobo2Go is an online and mobile meal ordering system designed for the restaurant and food to go market. It can be configured for click and collect, delivery, eat in, seat or in-room ordering.

The system enables you to offer a pre order, pre pay service for your customers, improving service, increasing repeat orders and boosting sales.

The solution includes desktop and mobile ordering sites that are branded for your business. The ordering sites can be quickly and easily integrated with an existing website or app, allowing your customers to order via PC, tablet or smartphone.

Orders are printed in-store according to a production management system that enables staff to focus on order preparation. The volume of orders accepted can be controlled according to predefined daily timeslots.

Mobo2Go comes complete with a cloud based management dashboard to view sales, manage menus and prices, set delivery rules, run promotions and create voucher campaigns.

Postcode lookup, SMS text marketing, email campaigns and driver tracking can be easily added to your system.
